What is slow, manual or unclear?

Every Friday I write the weekly update for my team. I take an aggregated KPI table (contacts per category, average handling time, backlog size, with no names and no user IDs) and write about 150 words on trends, risks and one ask. It takes about an hour, and the tone is different every week. My team lead reads and approves the text before I post it in our team Slack channel.

🔒 Describe the process, not the people. Do not include names.

👉 **What to do**

1. Choose your **department** (required).
2. Describe **what is slow, manual or unclear** and why it matters (required).
3. Optional: add the tools you use today and how often.
4. Click **Find my fix** and wait about 30 seconds.
5. Read your report and **send feedback** at the end.

💾 Save your reference code (FMP-...) to check the status later.

Your problem

Every Friday, you spend about an hour writing a weekly update for your team. This includes analyzing an aggregated KPI table and summarizing trends, risks, and an ask. The tone varies each week, and your team lead reviews the text before posting it in Slack.

Fix it with an internal tool

You can automate this process using KAi Assist. Here’s how:

1. Export the KPI sheet (aggregated, D2).
2. Upload it in the Analyse table.
3. Ask for a short update with trends and risks.

Sample request: "You are an ops analyst. From this table, write a 150-word weekly update: 3 trends, 2 risks, 1 ask. Plain German, no jargon."

Approved external alternative

If you prefer an external tool, consider Microsoft 365 Copilot for drafting your updates.

How others solve it

Companies are increasingly automating their weekly updates by using templates and integrating live data. Tools like Coda and Beautiful.ai help streamline the reporting process, reducing manual effort and improving readability.

Is it allowed?

Yes, compliance is green. The use of KAi Assist for drafting the update meets internal tool criteria and ensures no personal data is involved. The output can be checked before use.
