What is slow, manual or unclear?

Every Friday I write the weekly update for my team. I take an aggregated KPI table (contacts per category, average handling time, backlog size, with no names and no user IDs) and write about 150 words on trends, risks and one ask. It takes about an hour, and the tone is different every week. My team lead reads and approves the text before I post it in our team Slack channel.

How it works

🌐 **Research**
Web, news and research papers

📚 **Internal check**
AI policy, approved tools, works council, past projects

🚦 **Is it allowed?**
Green, amber or red with policy rule IDs

📝 **Your fix**
Steps, sources and a confidence score

🔒 Describe the process, not the people. Do not include names.

👉 **What to do**

1. Choose your **department** (required).
2. Describe **what is slow, manual or unclear** and why it matters (required).
3. Optional: add the tools you use today and how often.
4. Click **Find my fix** and wait about 30 seconds.
5. Read your report and **send feedback** at the end.

💾 Save your reference code (FMP-...) to check the status later.

Your problem

Every Friday, creating the weekly update for KPI reporting is time-consuming and the tone varies each week.

Fix it with an internal tool

KAi Assist

1. Export the KPI sheet (aggregated, D2).
2. Upload it in the Analyse table.
3. Ask for a short update with trends and risks.
   Sample request:
   You are an ops analyst. From this table, write a 150-word weekly update: 3 trends, 2 risks, 1 ask. Plain German, no jargon.

Approved external alternative

If KAi Assist is not suitable, consider using Microsoft 365 Copilot for report generation.

How others solve it

Many companies automate KPI reporting to save time and reduce errors. They utilize tools that automatically pull data and standardize report formats, allowing teams to focus on analysis rather than data collection.

Is it allowed?

Compliance level is green. The process follows policy rules G1, G2, and G5, ensuring no data protection violations occur and includes human checks for output.
