Kleinanzeigen Approved AI Tools List and Usage Guide

Document ID: KA-AI-TOOLS-002 | **Version:** 1.0 | **Valid from:** 1 October 2026 | **Owner:** AI Governance Board | **Updated:** monthly

Related documents: KA-AI-POL-001 Internal AI Policy (data classes D1 to D5, rules G/A/R); KA-BV-AI-2026 Works Council Agreement; KA-AI-PROJ-004 Past AI and Process Projects.

FICTIONAL DEMO DOCUMENT for an Ironhack bootcamp project. Internal tool names, adoption figures and approval statuses are invented. External product names are real, but their approval status here is fictional and says nothing about Kleinanzeigen's actual tool choices.

1. How to Use This List

Follow the **internal first** rule from KA-AI-POL-001 section 6: check the internal tools first, then approved external tools, and never use a not approved tool with company data. Each tool may only receive data up to its approved data class. Internal tools have a usage guide with steps and examples so you can solve your problem today.

Tool	Type	Status	Max data class	Best for	Owner
KAi Assist	Internal	Approved, all staff	D3	Drafting, summarising, translating, formulas, analysing tables	AI Enablement (CPO)
Ticket Lens	Internal	Approved, CS / Ops / Trust and Safety	D4	Summarising tickets, suggesting category and macro, translating	CS Tools team
FlowMate	Internal	Approved	D2	Automating repetitive steps between tools, scheduled reports, reminders	IT Automation
Knowledge Finder	Internal	Approved, all staff	D2	Finding processes, policies and how-tos with sources	Internal Comms and Knowledge
Insight Desk	Internal	Pilot (BI + Finance)	D2 (aggregated)	Questions on KPIs in plain language, charts	BI and Analytics

2.1 KAi Assist (internal)

What it is	Kleinanzeigen's own generative AI assistant, hosted in an EU data zone. Company data is not used to train the model.
Status / data class	Approved for all employees. Data up to **D3 Confidential**. No D4 personal or D5 employee data.
Owner / help	AI Enablement team (CPO organisation). Help channel: #kai-assist-help.
Access	Single sign-on at kai.intern, or type /kai in Slack. No request needed.
Modes	Write · Summarise · Translate · Analyse table (upload CSV or XLSX up to 20 MB) · Team prompt library

How to use it

1. Open kai.intern or type /kai in Slack.

2. Pick a mode. Use **Analyse table** for spreadsheets, **Summarise** for long documents.

3. Paste or upload the content. Remove names of customers and colleagues first (describe the process, not the people).

4. Write the request with three parts: **role** ("You are an ops analyst"), **goal** (what you need), **format** (table, bullet list, email, formula).

5. Check the result: numbers, links and facts. You are responsible for what you use.

6. If it works, click **Save to team library** so colleagues can reuse the prompt.

Examples: problem → how to solve it

Problem	How to solve it with this tool	Sample request
Writing the weekly ops update takes an hour every Friday	Export the KPI sheet (aggregated, D2), upload it in Analyse table, ask for a short update with trends and risks. Save the prompt in the team library and reuse it weekly.	"You are an ops analyst. From this table, write a 150-word weekly update: 3 trends, 2 risks, 1 ask. Plain German, no jargon."
I build spreadsheet formulas by trial and error	Describe the columns and the result you want; ask for the formula and a one-line explanation.	"Column A is category, column C is resolution time in hours. Give me a Google Sheets formula for the median resolution time per category."
The 20-page process guide is never read	Upload the guide in Summarise mode and ask for a one-page checklist; send it to the owner for approval.	"Turn this guide into a checklist of max 12 steps, grouped by role, with the decision points in bold."

Limits: do not

• Paste customer messages, user IDs, phone numbers or emails (D4). Use Ticket Lens for tickets.

• Paste employee performance, sick leave or HR data (D5, Policy R2).

• Use it to evaluate or rank colleagues (Policy R3).

• Treat it as a source of truth. It has no live connection to internal systems.

Known issues and adoption

• **Adoption:** 64% of employees active weekly; satisfaction 4.2 / 5.

• **Top feedback:** wants a connection to Knowledge Finder and live data; German output is sometimes too formal; team prompt library is hard to search.

2.2 Ticket Lens (internal)

What it is	An AI side panel inside the customer service platform (Zendesk). It summarises ticket threads, suggests category and priority, suggests the best reply macro and translates messages.
Status / data class	Approved for Customer Service, Operations and Trust and Safety agents. Data up to **D4 Personal data**, because the data never leaves the CS platform. Suggestions only: the agent always sends (automatic sending would be Policy A4).
Owner / help	CS Tools team (Customer Operations). Help channel: #ticket-lens.
Access	**Off by default.** In any ticket: Apps panel (right side) → Ticket Lens → Enable → Pin to sidebar. Takes one minute; no request needed.

How to use it

1. Open a ticket. If you do not see the Ticket Lens panel, enable and pin it in the Apps panel (see Access).

2. Click **Summarise** to get a 3-line summary of the whole thread: issue, what was tried, what the user wants.

3. Check the **suggested category and priority**. If wrong, correct it and click thumbs-down; this trains the model.

4. Click **Suggest macro**: Ticket Lens ranks the 3 best-fitting macros out of the 300+ in the library.

5. For foreign-language tickets, click **Translate**, write your reply in German, then **Translate reply**.

6. Edit and send the reply yourself.

Examples: problem → how to solve it

Problem	How to solve it with this tool	Sample request
Long tickets with 15+ messages take ages to read	Use Summarise before reading. For handovers between shifts, paste the summary into the internal note.	Click Summarise; optional: "Add the last promise we made to the user."

Problem	How to solve it with this tool	Sample request
Finding the right macro among 300+ is slow	Use Suggest macro, pick one of the top 3, adjust the personal part.	Click Suggest macro; filter by "Payment" or "Shipping" if the list is long.
Sellers write in Polish, Turkish or Arabic	Translate in place, reply in German, translate the reply back. Keep the original in the thread.	Click Translate, then Translate reply (target language detected automatically).

Limits: do not

• Copy ticket content into KAi Assist or any external tool (data would leave the CS platform: Policy R1 / R7).

• Use bulk actions or auto-send. Every reply is sent by an agent.

• Rely on it for images or attachments; it reads text only.

Known issues and adoption

• **Adoption: low.** 18% of about 420 CS agents use it weekly, although the 2025 pilot cut handling time on long tickets by about 25% (see KA-AI-PROJ-004, project P-02).

• **Why adoption is low:** off by default and hidden in the Apps panel; launched by one email with no training; category accuracy dropped to 71% after the 2026 category change, so agents stopped trusting it; the panel is English only.

• **Planned improvements (not yet funded):** on by default, 20-minute team training, retrain on 2026 categories, German UI.

2.3 FlowMate (internal)

What it is	Internal automation platform, run by IT on a self-hosted n8n instance. Moves data between approved tools, runs scheduled reports and sends reminders.
Status / data class	Approved. Data up to **D2 Internal**. Workflows touching D4 personal data need AI Governance Board review (Policy A3).
Owner / help	IT Automation team. Help channel: #flowmate.
Access	Two ways: (1) **Template Gallery**, self-service for trained "FlowMate builders" (one-day training, booked via the IT portal); (2) **workflow request** via an IT ticket, built by IT.
Connectors	Google Sheets, Slack, Jira, Confluence, KAi Assist (D2 only), email. Other connectors on request.

How to use it

1. Check the Template Gallery (flowmate.intern/templates) for a template that matches your task.

2. If you are a FlowMate builder: copy the template, connect your accounts, fill in the fields.

3. Test with sample data first, never with real customer data.

4. Activate the workflow and add yourself as owner, so alerts reach you if it fails.

5. No fitting template or not a builder? Open an IT ticket "FlowMate workflow request" with the steps you do by hand today, how often, and how long they take.

Examples: problem → how to solve it

Problem	How to solve it with this tool	Sample request
Every Monday I copy numbers from 3 sheets into one report	Template "Scheduled sheet merge + Slack post": runs Monday 8:00, merges the sheets, posts a summary to your team channel.	Template fields: source sheets, target sheet, channel, schedule.
I forget to follow up on escalated Jira issues	Template "Jira due-date reminder": sends a Slack message one day before due date and on the due date.	Template fields: Jira project, filter, Slack user or channel.
Daily manual export from the CS platform into a sheet	No template exists, and CS data is D4. Open an IT ticket; the request goes to Board review (Policy A3).	IT ticket: "Daily export of ticket counts per category (no user data) to sheet X."

Limits: do not

• Build workflows with customer or employee personal data without Board review.

• Connect tools that are not on the connector list, or use personal accounts.

• Leave workflows without an owner.

Known issues and adoption

• **Adoption: low in operations.** 31 active workflows company-wide, only 9 built by operations teams; 40% of the 12 templates have never been used.

• **Why:** built top-down by IT; templates were designed without ops input and do not match daily ops tasks; builder training is a full day; IT workflow requests take about 6 weeks on average.

• **Side effect:** two ops teams asked for Zapier instead (now a pilot, section 4).

• **Improvement ideas:** co-design templates with the OEE team; a half-day builder training; a fast lane for small requests.

2.4 Knowledge Finder (internal)

What it is	AI search over the internal wiki (Confluence), the internal help centre and policy documents. Answers questions in plain language and always shows its sources.
Status / data class	Approved for all employees. Indexes only **D1 and D2** spaces. Confidential spaces and tickets are not included.
Owner / help	Internal Communications and Knowledge team. Help channel: #knowledge-finder.
Access	kf.intern, /ask in Slack, or "Ask KF" in the Confluence search bar.

How to use it

1. Ask a full question, for example "What is the current refund process for Direkt kaufen orders?"

2. Read the answer and **check the date of each source**. Pages older than 12 months may be outdated.

3. Open the source page to confirm the details before acting.

4. If the answer is wrong or outdated, tell the page owner (named on each page). There is no feedback button yet.

Examples: problem → how to solve it

Problem	How to solve it with this tool	Sample request
I don't know the current process for a rare case	Ask Knowledge Finder with the case in one sentence; confirm on the source page; ask the page owner if it is older than 12 months.	"How do we handle a payment dispute when the buyer says the item never arrived?"
New joiners ask the same questions every week	Point them to /ask in Slack; collect questions with no good answer and send them to the Knowledge team.	"Where is the onboarding checklist for new CS agents?"
Which AI tool am I allowed to use for this?	Ask with your data type; it answers from KA-AI-POL-001 and this list.	"Can I use DeepL for seller emails that contain phone numbers?"

Limits: do not

• Expect answers about confidential topics or individual tickets; they are not indexed.

• Act on an answer without opening the source.

Known issues and adoption

• **Adoption:** 27% of employees active weekly; many still ask colleagues on Slack instead.

• **Known issues:** 38% of indexed pages have not been updated for over 12 months; many pages still refer to former Adevinta group tools after the separation; German questions get weaker results than English ones; no feedback button.

2.5 Insight Desk (internal, pilot)

What it is	Ask questions about business KPIs in plain language; Insight Desk writes the SQL against the data warehouse and shows a chart.
Status / data class	**Pilot.** BI team and 15 pilot users in Finance. Aggregated tables only (**D2**), no row-level user data. Use outside the pilot group is Policy A1 (Board review).
Owner / help	BI and Analytics team. Help channel: #insight-desk-pilot.
Access	Pilot users only. To join, request access via #insight-desk-pilot; requests are reviewed by the AI Governance Board. Current waitlist: 60+ people.

How to use it

1. Choose a dataset (for example "CS contacts", "Listings", "Transactions").

2. Ask a question in one sentence, including the time range.

3. Open **Show SQL** and check the filters. For business-critical reports, ask BI to review the SQL.

4. Save the chart to a dashboard or export it.

Examples: problem → how to solve it

Problem	How to solve it with this tool	Sample request
I need CS contacts per 1,000 transactions by week	Pilot users: ask in Insight Desk. Others: ask a pilot user or BI, or use KAi Assist Analyse table on an aggregated export.	"Weekly CS contacts per 1,000 transactions, last 12 weeks, by category."
Which categories have the most reported listings?	Ask with a time range and a top-N limit.	"Top 10 categories by reported listings in October 2026."
Ops wants its own KPI dashboard	Request pilot access (Board review) and describe the KPIs; meanwhile use an aggregated export with KAi Assist.	Access request: team, KPIs, data needed, how often.

Limits: do not

• Use it if you are not in the pilot group; request access instead.

• Export row-level data or join tables with user data.

Known issues and adoption

• **Most requested tool by operations** in OEE intake sessions, but access is limited to the pilot.

• **Side effect:** ops teams export CSVs and analyse them by hand or, against policy, in personal AI accounts (Policy R1).

• **Open decision:** pilot extension to operations is waiting for an AI Governance Board decision.

3. Approved External Tools

Use these only if no internal tool fits, and only within the stated data class. Licences are requested via the IT portal.

Tool (vendor)	Use for	Max data class	Who	Notes
Microsoft 365 Copilot (Microsoft)	Drafting and summarising in Word, Outlook, Teams, Excel	D3	Licensed users (500 licences)	Do not paste customer data from the CS platform
DeepL Pro (DeepL)	Translating internal documents and emails	D2	All staff on request	No personal data (D4); use Ticket Lens for customer messages
Miro AI (Miro)	Clustering workshop notes, process maps, retros	D2	All staff	No names in sticky notes

Tool (vendor)	Use for	Max data class	Who	Notes
Atlassian Intelligence (Atlassian)	Summaries and drafts in Jira and Confluence	D2	All staff	Confidential spaces excluded
GitHub Copilot Business (GitHub)	Code completion and review	D3	Engineering	Never paste secrets or credentials
Grammarly Business (Grammarly)	English writing quality	D2	On request	Business licence only; free browser plugin is not approved

4. Pilot Tools

Tool (vendor)	Pilot scope	Max data class	Pilot ends	Notes
Zapier (Zapier)	Two operations teams automating simple steps between Sheets, Slack and Jira	D2	31 March 2027	Started because FlowMate requests take about 6 weeks. Outcome decides whether ops gets self-service automation

5. Not Approved Tools

These tools must not be used with company data above D1. Requests go to #ai-governance-review.

Tool or tool type	Why not	Policy rule	Use instead
Personal or free accounts of ChatGPT, Claude, Gemini and similar chatbots	Data leaves Kleinanzeigen, no contract, may be used for training	R1	KAi Assist
Meeting recorder and transcription bots (for example Otter.ai, Fireflies.ai, Read.ai)	Records colleagues' speech and behaviour; works council co-determination needed	R3	Own notes, then KAi Assist Summarise
Free AI browser extensions and plugins (writing, summarising, translating)	Read page content, including the CS platform and personal data	R1, R7	Ticket Lens, KAi Assist, Grammarly Business
AI CV screening and candidate ranking tools	High-risk employment use under EU AI Act Annex III	R4	No AI in hiring decisions without Board and Works Council approval
Employee productivity or activity analytics tools	Monitors and evaluates employees	R3	Team-level process metrics without personal data
DeepL free version	No business contract; personal data must not be used	R7	DeepL Pro (D2) or Ticket Lens (D4)

6. Requesting a New Tool or Access

Submit the need through "Fix My Process" or #ai-governance-review: the problem, department, data class, number of users and why no listed tool fits. The AI Governance Board decides as described in KA-AI-POL-001 sections 9 and 10. Requests where no internal tool exists are tracked and used for the AI roadmap.

Annex A: Common Friction → First Tool to Try

Friction	First tool	Alternative
Writing recurring updates, emails or summaries	KAi Assist (Write / Summarise)	Microsoft 365 Copilot
Reading long customer ticket threads	Ticket Lens (Summarise)	None: customer data stays in the CS platform
Choosing the right reply macro	Ticket Lens (Suggest macro)	Knowledge Finder for the process

Friction	First tool	Alternative
Foreign-language customer messages	Ticket Lens (Translate)	None for D4 data
Copying data between sheets and tools every week	FlowMate (template)	Zapier (pilot teams only)
Reminders and follow-ups that get forgotten	FlowMate (Jira due-date reminder)	Atlassian automation
Finding the current process or policy	Knowledge Finder	Ask the page owner
KPI questions and charts	Insight Desk (pilot users)	KAi Assist Analyse table on aggregated export
Spreadsheet formulas and data cleaning	KAi Assist (Analyse table)	Microsoft 365 Copilot in Excel
Workshop notes and process maps	Miro AI	KAi Assist Summarise
Translating internal documents	DeepL Pro	KAi Assist Translate
