Past AI and Process Projects

Document ID: KA-AI-PROJ-004 | **Version:** 1.0 | **As of:** October 2026 | **Owner:** AI Governance Board, with the OEE team

Related documents: KA-AI-POL-001 Internal AI Policy; KA-AI-TOOLS-002 Approved AI Tools List; KA-BV-AI-2026 Works Council Agreement.

FICTIONAL DEMO DOCUMENT for an Ironhack bootcamp project. Projects, figures and outcomes are invented.

1. Purpose

This document records what Kleinanzeigen has already tried with AI and process improvement: what worked, what did not, and why. Use it before starting something new: check if the problem was solved before, reuse what worked, and avoid repeating what failed. Effort is given in person-weeks (PW) of internal work.

2. Overview

ID	Project	Department	Year	Level	Status	Result in one line
P-01	KAi Assist rollout	All	2025	Green	Live	64% weekly active; champions network drove adoption
P-02	Ticket Lens pilot and rollout	Customer Service	2025 to 2026	Green	Live, low adoption	Pilot cut handling time ~25%; rollout reached only 18%
P-03	FlowMate automation platform	IT / all	2025 to 2026	Green	Live, low ops use	31 workflows, 9 from ops; templates did not fit ops work
P-04	Knowledge Finder	Internal Comms	2025	Green	Live	27% weekly active; outdated content limits trust
P-05	Agent Productivity Score	Customer Service	2025	Red	Stopped	Blocked by Works Council; replaced by team metrics
P-06	Unapproved meeting bot	Sales Ops	2025	Red	Stopped (incident)	Recorded colleagues without consent; tool banned
P-07	Insight Desk pilot	BI / Finance	2026	Amber	Pilot	30% fewer ad-hoc report requests to BI
P-08	Zapier pilot for ops	Operations	2026	Amber	Pilot running	14 automations, ~6 h/week saved per team
P-09	Listing review assistant	Trust and Safety	2026	Amber	Live with conditions	Review time -35%; human decides every case

3. Project Details

P-01 KAi Assist rollout

Department / year	All departments · 2025
Tools / level	KAi Assist (internal) · Green (G1, G2, G5)
Effort	Build and hosting setup 14 PW; rollout and champions 6 PW

Problem: Employees were using personal chatbot accounts for work (Policy R1) because there was no approved option.

Solution: EU-hosted internal assistant with simple modes, a team prompt library and a network of 40 volunteer "AI champions" across departments who ran 30-minute team sessions.

Result: 64% of employees active weekly after 9 months; satisfaction 4.2 / 5; reported use of personal chatbot accounts dropped sharply in the yearly survey.

Lessons: Bottom-up champions and short team sessions beat email announcements. Teams adopt fastest when they can copy a working prompt for their own task.

P-02 Ticket Lens pilot and rollout

Department / year	Customer Service · pilot 2025, rollout January 2026
Tools / level	Ticket Lens (internal, inside Zendesk) · Green (G1, G5), D4 inside the CS platform
Effort	Pilot 8 PW; rollout 1 PW

Problem: Agents spent long time reading long ticket threads and searching 300+ macros.

Solution: AI side panel that summarises threads, suggests category and macro, and translates. Pilot with 3 teams (60 agents) who co-designed the panel with the CS Tools team and had weekly feedback sessions.

Result: Pilot: handling time on long tickets (10+ messages) down about 25%, agent satisfaction 4.4 / 5. Company rollout to about 420 agents by one email, panel off by default, no training: weekly use only 18% after 9 months. After the 2026 category change, category accuracy fell to 71% and was not retrained.

Lessons: A tool that works in a co-designed pilot can still fail at rollout. The pilot had training, feedback and trust; the rollout had none. Default-on, training (KA-BV-AI-2026 section 8) and retraining after process changes are now required. Strong candidate for a relaunch, not a new tool.

P-03 FlowMate automation platform

Department / year	IT, for all departments · 2025 to 2026
Tools / level	FlowMate (internal, self-hosted n8n) · Green for D1 and D2
Effort	Platform 10 PW; 12 templates 4 PW; ongoing request handling about 0.5 FTE

Problem: Many teams copy data between sheets and tools by hand every week.

Solution: IT built a central automation platform with 12 templates chosen by IT, a one-day builder training, and an IT ticket process for custom workflows.

Result: 31 active workflows company-wide, only 9 built by operations teams; 40% of templates never used; custom requests take about 6 weeks. Two ops teams asked for Zapier instead (see P-08).

Lessons: Top-down tooling without the users' input produced templates nobody needed. Co-design with the OEE team, shorter training and a fast lane for small requests are the main improvement levers.

P-04 Knowledge Finder

Department / year	Internal Communications and Knowledge · 2025
Tools / level	Knowledge Finder (internal) · Green (D1, D2)
Effort	Build 9 PW; content clean-up 2 PW (one-off)

Problem: Employees could not find current processes; the same questions were asked again and again in Slack.

Solution: AI search over Confluence, the internal help centre and policy documents, with sources on every answer.

Result: 27% weekly active. Good answers where pages are current, but 38% of indexed pages are older than 12 months and many still refer to former Adevinta group tools after the separation. German questions perform worse.

Lessons: AI search is only as good as the content. Page ownership, review dates and a feedback button matter more than the model. A content clean-up after the separation is overdue.

P-05 Agent Productivity Score (stopped)

Department / year	Customer Service management · 2025
Tools / level	External analytics vendor (never approved) · Red (R3, R4)
Effort	Vendor evaluation 3 PW before stop

Problem: Management wanted to find coaching needs faster.

Solution: Proposed AI score per agent based on handling time, reopen rate and sentiment, used to assign complex tickets to top-scoring agents.

Result: Stopped. The Works Council objected under BetrVG section 87(1) no. 6 (performance monitoring); task allocation based on measured performance is high-risk under EU AI Act Annex III. Replaced by **team-level** quality metrics (groups of 5 or more) and voluntary coaching.

Lessons: Involve the Works Council at the idea stage. The coaching goal was valid; the design (individual scoring) was not. Team-level metrics reached the goal without monitoring.

P-06 Unapproved meeting recording bot (incident)

Department / year	Sales Operations · 2025
Tools / level	Free meeting transcription bot (not approved) · Red (R1, R3)
Effort	Incident handling 2 PW

Problem: A team wanted meeting notes without manual effort.

Solution: A team lead connected a free transcription bot to the team calendar. It joined and recorded internal and customer calls.

Result: Reported as an incident: colleagues and customers were recorded without consent and data was stored outside the EU. The bot was removed, recordings deleted, and meeting recorder bots were added to the not approved list.

Lessons: The need was real and is still open. Safe alternative today: own notes, then KAi Assist Summarise. A properly agreed solution would need a section 5 procedure under KA-BV-AI-2026.

P-07 Insight Desk pilot

Department / year	BI and Analytics with Finance · 2026
Tools / level	Insight Desk (internal, pilot) · Amber (A1 for users outside the pilot)
Effort	Build 8 PW; pilot support 0.2 FTE

Problem: BI received many small ad-hoc report requests that took days to answer.

Solution: Plain-language questions on aggregated warehouse tables, with generated SQL that users can check.

Result: 30% fewer ad-hoc report requests to BI from pilot users. 60+ people on the waitlist, mostly from operations. Extension to operations is waiting for an AI Governance Board decision.

Lessons: High demand from operations is clear evidence for scaling. Open question: training ops users to check SQL, and which tables are safe to open.

P-08 Zapier pilot for operations

Department / year	Operations (2 teams) · 2026, ends 31 March 2027
Tools / level	Zapier (external, pilot) · Amber (A1), D1 and D2 only
Effort	Setup 1 PW; teams build their own automations

Problem: FlowMate requests took about 6 weeks; teams wanted to automate small steps themselves.

Solution: Two ops teams build simple automations between Sheets, Slack and Jira themselves after a 2-hour introduction.

Result: 14 automations in 3 months, about 6 hours a week saved per team (team estimate). No incidents.

Lessons: Self-service and short training drive bottom-up adoption. The decision is whether to give ops this speed in FlowMate or approve Zapier for ops.

P-09 Listing review assistant

Department / year	Trust and Safety · 2026
Tools / level	Internal model inside the moderation tool · Amber (A3, D4), approved with conditions
Effort	Build 12 PW; DPIA 2 PW

Problem: Reported listings piled up; reviewers checked every report from scratch.

Solution: AI pre-sorts reported listings by likely violation and highlights the relevant text. Approved by the Board with conditions: a human decides every case, no automatic removal (GDPR Article 22), DPIA done, monthly accuracy review.

Result: Average review time down 35%; no increase in wrong removals; reviewers kept full control.

Lessons: Amber cases can go live quickly when conditions are clear from the start: human decision, DPIA and an accuracy check.

4. Patterns Across Projects

Pattern	Evidence	Implication
Bottom-up beats top-down	P-01 and P-08 adopted fast; P-03 built by IT without users stalled	Co-design with the people who do the work
Rollout matters as much as the tool	P-02: strong pilot, weak rollout (18%)	Default-on, team training, feedback channel
Content and data quality limit AI	P-04 outdated pages; P-02 categories not retrained	Plan ownership and retraining after process changes
Involve the Works Council early	P-05 stopped late; P-09 approved with clear conditions	Use KA-BV-AI-2026 sections 4 and 5 at idea stage
Unmet needs lead to shadow AI	P-06 meeting bot; P-07 waitlist exporting CSVs	Track needs with no internal solution as roadmap input
